# cppGameTemplate

鉴于面向对象课程设计要写一个小游戏,我在网上随便抄了抄来写了一个框架,到时候方便写也方便ai生成, 大部分的都只需要进行比较机械重复的工作就好了

### 本地调试

本地 Windows 调试器

## 可视化库

在网上看教程用的是easyx,对于其中的一些功能想要查阅的话可以直接看文档,需要安装的话直接执行文件夹中的easyx的可执行文件就安装好了,在使用的时候只需要#include<graphics.h>来导入头文件即可

### 开发流程

#### 素材导入

把老师给的素材弄成一个个对应的图片,也就是俗称的精灵,序列帧图片拆分教程,然后在main.cpp中去声明

这个全局变量

```
Atlas coin_atlas; // 精灵图集 <sub>然后在</sub>
```

load\_resources中去加载资源

在对应的场景中利用图集去加载动画

```
void on_enter()
{
    std::cout << "Scene1 on_enter" << std::endl;
    coin_animation. set_atlas(&coin_atlas);
    coin_animation. set_interval(60);
    coin_animation. set_loop(true);
}</pre>
```

场景创建

#### 在scene过滤器下面创建对应的场景头文件,然后创建场景类去实现方法(灰色的不要管,是ai的提示)

```
#include "scene.h"
#include "sceneManager.h"
#include "camera.h"
#include "atlas.h"
   extern Atlas coin_atlas;
   extern sceneManager scene_manager;
                               void on_enter()
                                                             \label{eq:std:cout} $$std::cout << "Scene1 on_enter" << std::endl; \\ coin_animation.set_atlas(&coin_atlas); 
                                                             coin_animation.set_interval(60);
                                                           coin_animation.set_loop(true);
                                 void on_update(int delta)
                                                              coin animation. on update (delta);
                                  void on_draw(const Camera& camera)
                                                              coin_animation.on_draw(100, 100);
                                  void on_input(const ExMessage& msg)
                                                                \hspace{0.1cm}  \hspace{0.1cm}  \hspace{0.1cm}  \hspace{0.1cm}  \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1cm} \hspace{0.1
                                                                                           scene manager.switch scene(sceneManager::SceneType::SCENE TYPE 2);
                                 void on_exit()
                                                               std::cout << "Scene1 on_exit" << std::endl;</pre>
                               Animation coin_animation;
```

#### 在main.cpp中去声明对应的场景变量, 然后实例化

```
Scene* scene1 = nullptr; // 场景指针
Scene* scene2 = nullptr; // 另一个场景指针
scene1 = new Scene1();
scene2 = new Scene2();

在场景管理器sceneManager.h中修改枚举类,修
```

```
public:
    enum class SceneType {
        SCENE_TYPE_1,
        SCENE_TYPE_2,
        // 诸如此类
        };
```

改switch scene方法

```
void switch scene(SceneType type) {
    if (current scene) {
        current_scene->on_exit();
    switch (type) {
    case SceneType::SCENE_TYPE_1:
        current scene = scene1;
        break:
    case SceneType::SCENE TYPE 2:
        current scene = scene2;
        break:
    default:
        break:
    if (current scene) {
        current_scene->on_enter();
```

接着按照自己的

逻辑去修改场景的那几个on\_enter,on\_update,on\_draw,on\_input,on\_exit方法基本上就完事了,ai写自己手写都很方便
